

# MoneyVac KIT 63

The TELETUBE **MoneyVac KIT 63** system is a DIY pneumatic conveyor. It is a small diameter compact system that is mainly used for cash evacuation.

The one-way system can send from a single departure station to the arrival unit, that can be integrated into the safe or even directly into the cash transportation bag.

The **MoneyVac KIT 63** system uses small sized capsules. These are available in different colors, including transparent.

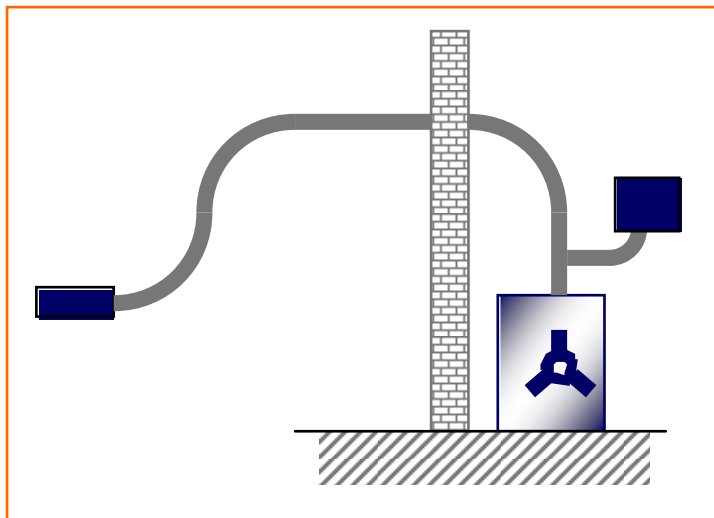

This system-in-a-box is available in three versions.

The BASIC and STANDARD KITs contain the compact central gear, a departure station, flexible tubing, an arrival unit, capsules and the mounting hardware. The clear installation manual guarantees an easy DIY-installation.

The NO-FLEX version is the base for a rigid-tube system, to be installed by professional resellers.

Various options are available, including an extension kit for long distances.

## MoneyVac KIT 63

- Simple, efficient, compact and low cost
