

# MultiSite

The TELETUBE **MultiSite** system is a pneumatic conveyor for general use, linking two, three or four locations.

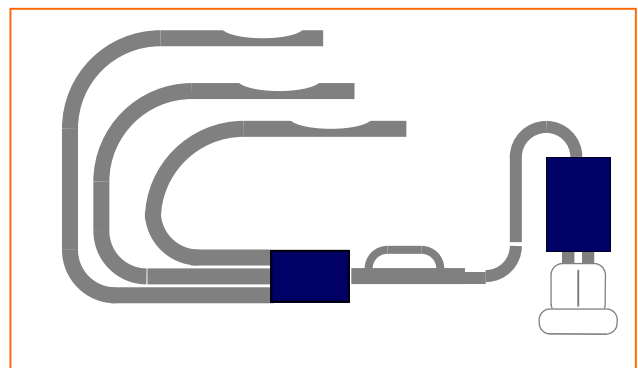

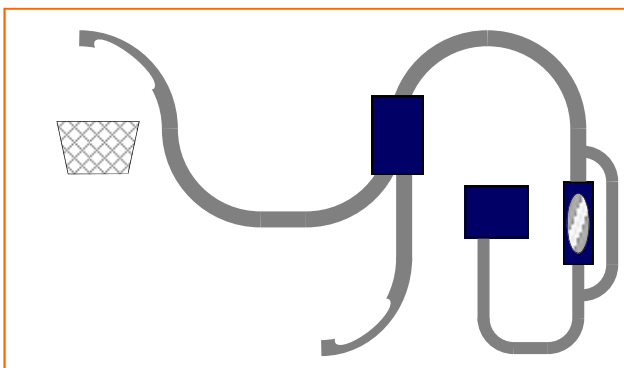

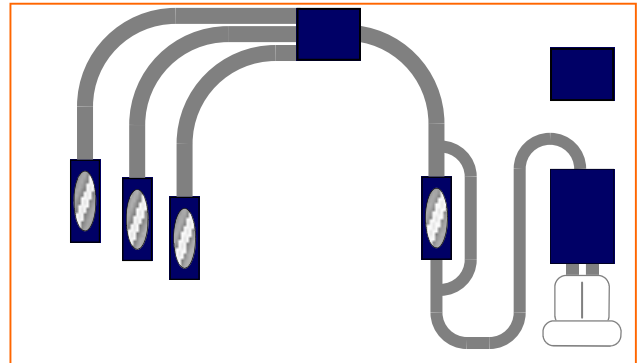

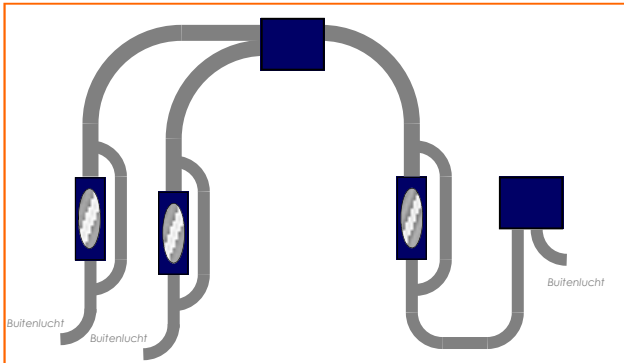

It is a two-way, single tube system. It can be configured to send to and fro between the different stations.

**MultiSite** is available in different tube sizes: 63, 90, 110, 160 and 315mm. They all use the same central gear, with integrated single phase blowers or external three phase blowers (**MultiSite 'T'**).

Different station types can be used, and a wide variety of carrier types are available, adapted to the needs of the application.

## MultiSite

- Simple and efficient two way system
- Full automatic
- Start button and audio-visual arrival signal with acknowledge
- Different control panels available (button, keyswitch, ...)
- Carriers in different types and colors available
- Powered by a regular 230V/16A outlet
- Vertical, horizontal or lateral departure stations
- External air inlet / outlet to avoid condensation
- Power and function indicators
- Traffic counter
