T-Mail
Secure Tube Mail system

The TELETUBE **T-Mail** system is a specialized pneumatic conveyor for personalized mail applications.
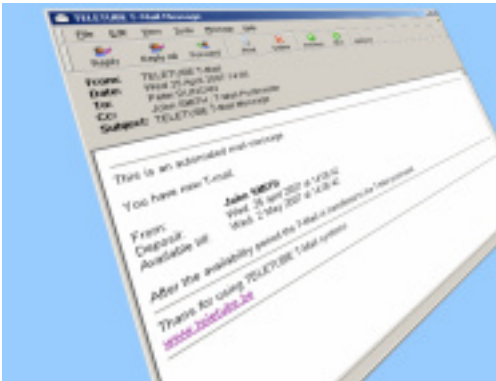

It is a two-way, single tube system that can send between stations and storage units.

The **T-Mail** system uses 110mm tubing. Up to 99 users can safely and securely exchange objects that are intermediately stored the storage units.
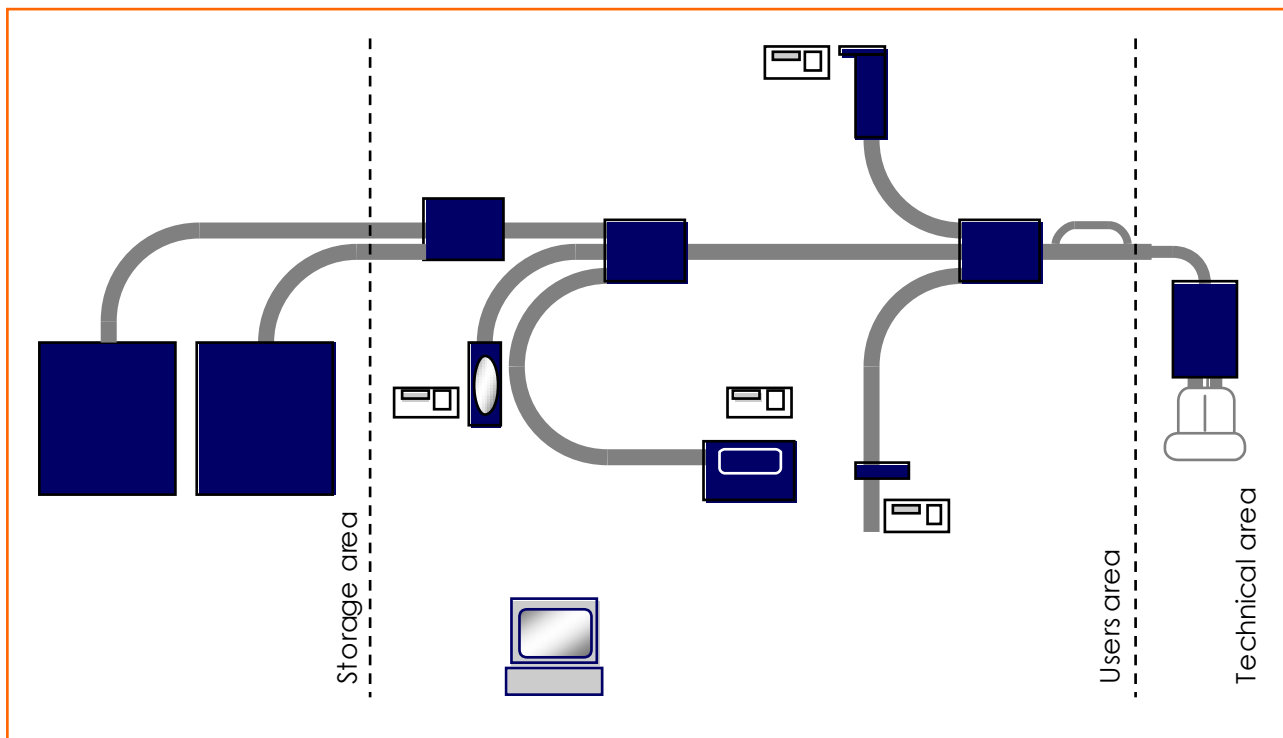

Users are informed by e-mail or by SMS about the status of their mail objects.

Different station types can be used, ranging from simple open end tubes up to full automatic motorized desk-integrated stations.

A variety of carrier types are available, adapted to the needs of the **T-Mail** application.

T-Mail

- Special application to create a secure object-exchange system
- Fully configurable, with up to 99 users, 99 stations and 48 storage locations
- Vertical, horizontal or lateral departure stations
