Removal of money from the tills by pneumatic tube transport.

c.p. bourg s.a.

Dispatching check-outs

The accumulation of money collected at the tills of chains stores, cinemas, service stations, etc., is increasingly endangering the safety of clients and personnel.

The only way of putting crooks off attacking the tills is to remove the object of their desires: LITTLE MONEY = SAFETY.

Removing the money manually through the shopping area is quite risky for the person carrying it, and costs the company valuable time.

With removal of the money by MULTISAFE pneumatic transport, the cashiers can regularly empty their tills into a protected area or straight into a safe, quite simply and without wasting any time; then they can resume their work without any worries, and without the continuous stress caused by the presence in the drawer of large sums of money.

Lightweight and discreet, the MULTISAFE system takes up little space; it can be installed cheaply in any existing commercial layout.

Cartridge

The capsules take 50 to 70 notes, cheques or other items. The pockets take up to 150 notes. The cartridges take up to 400 notes and permit transport of coins in cartridges.

No matter what the scale of the store may be, the MULTISAFE management centre can easily handle from 2 to 120 dispatching stations. A program is available for monitoring the number and time of dispatches, origin, etc,...

Once the cartridge has been placed in the station, it cannot be taken out again; the money is already safe, even before it has been removed to the safe. The dispatch speed is 6 metres / second ...
